

RxOrderly

Effortless, organized control for your prescriptions.

User Manual

Version 0.5.16 · May 2026
Rivka SVCS LLC · rxorderly.com

Work in progress. Screenshots are still being captured. Where you see a *[Screenshot to come]* marker, an image of the actual screen will appear in a future revision.

Welcome — I'm so glad you're here.

This is the manual for RxOrderly, and it's going to walk you through everything the app can do for you — clearly, calmly, one chapter at a time.

A bit about me: I'm 81. For fifteen years I cared for my mother through Alzheimer's; she passed at 93. Now I'm navigating advanced age myself — fortunate, for the moment, to be functioning near full capacity. It struck me that with nearly everyone carrying a smart device or tablet these days, there ought to be a serious app for managing the daily business of medications and medical routines. I went looking. I found many that did pieces of it; none that did the whole job well. So I wrote one.

Anyone with a real list knows what I mean. A pill in the morning, an inhaler at lunch, eye drops at bedtime, a refill that needs to be called in by Thursday — and the new prescription the cardiologist just added. It's a lot to hold in your head. It shouldn't have to be.

So this app is going to hold all of it for you. The medications, the schedules, the refills, the doctors, the pharmacies, the insurance cards, the questions you want to remember to ask. All of it. In one place. On your phone. Quietly working for you.

If you ever get stuck or have a question, my email is right here: **support@rxorderly.com**. I'm one person, and I answer every email myself.

Warmly,

Jacques Fiorentino

Founder, Rivka SVCS LLC

Maker of RxOrderly

How to Use This Manual

The book is laid out in 24 short chapters. Each one covers a single piece of the app and shows you, step by step, what to tap, where, and why.

You'll find:

- Pictures of the actual screens, so you always know what to expect.
- Plain English, with no medical or computer jargon to decode.
- Helpful tips set off in highlighted boxes when something is worth remembering.

A friendly suggestion: read the first several chapters in order — they walk you through getting the app set up with your medications, doctors, pharmacies, and current supply. After that, the rest of the book is a reference. Whenever you need to do something — request a refill, prepare for a doctor visit, print your Medical ID card — just turn to the chapter that covers it.

Bookmark the chapters you come back to most. The manual is here whenever you need it.

What RxOrderly Does for You

First and foremost, RxOrderly is going to make the day-to-day business of managing your prescriptions practically effortless.

No more juggling pill bottles to figure out which one is running low. No more frantic phone calls to the pharmacy on a Sunday evening. No more standing at the counter trying to remember the name of the medication, the strength, and the doctor who prescribed it. No more lost paper schedules taped to the refrigerator.

RxOrderly takes care of all of that for you. The app keeps a careful, up-to-date record of every prescription you take, knows exactly how much you have on hand, knows exactly when you'll need a refill, and quietly speaks up when it's time to ask for one. When that moment comes, it composes the refill request for you, ready to go in a single tap.

That alone would be a wonderful little tool to have.

But here is the joyful part: **that's just where the app begins.**

Far Beyond Refills

RxOrderly is also going to help you with:

- **Your daily medication routines.** Set up the times you take each medication, and the app will gently remind you when each one is due — every single dose, every single day, automatically.
- **Your therapies and care activities.** Physical therapy exercises, blood sugar checks, eye drops, breathing treatments, anything that isn't a pill — RxOrderly schedules and tracks it just like a medication.
- **Coming home from the hospital.** A hospital discharge often comes with a stack of new prescriptions, a brand-new schedule, and a head still tired from being unwell. RxOrderly is the perfect place to land. Type in the new medications, set up the new schedule, and a chaotic regimen becomes orderly and accessible — usually within an hour of getting home.
- **Preparing for a doctor's visit.** The Doctor Visit Prep wizard walks you through seven friendly questions and produces a tidy, printable sheet you can hand your doctor — your medication list, the symptoms you've noticed, the questions you want to ask, the changes you'd like to discuss. No more "I had a question, but I can't remember what it was."
- **Your Medical ID card.** A wallet-sized card with your medications, allergies, blood type, emergency contacts, and a special note for first responders. Print it, carry it, update it any time. If you ever need it, you'll be very glad it's there.
- **Researching your medications.** Look up any drug — interactions, side effects, warnings — straight from official FDA and U.S. National Library of Medicine sources.
- **Finding ways to save.** RxOrderly can tell you which prescription assistance programs you might qualify for, and points you to Medicare resources, NeedyMeds, RxAssist, and a free counselor in your area.
- **Keeping a complete history.** Every refill, every dose, every visit, every adjustment — recorded and easy to look up later.

In short, RxOrderly is your daily partner. Not a replacement for your doctor. Not a replacement for your pharmacist. A partner — one that quietly remembers everything so you don't have to.

Most Important Idea In This Book. The more RxOrderly knows about you, the more it does for you. *Please don't skip this part. It is the difference between a useful app and an extraordinary one.* The

app is a partner, and like any good partner, it can only help you with what you've told it. The more complete the information — your medications, your doses, your prescribers, your pharmacies, your insurance cards, your emergency contacts, your allergies, your blood type — the more the app can quietly do on your behalf. That up-front investment is what unlocks everything in this book. With your information filled in: Refill requests compose themselves, ready to send. Daily routines line up in a few taps. A Doctor Visit Prep sheet is ready in under a minute when you need one. Your Medical ID card is ready to print before anyone asks for it. Refill reminders fire on their own, days before you would have noticed. It is well worth taking the time — perhaps a quiet hour with your medication bottles and your insurance cards spread out in front of you — to fill everything in completely. And you don't have to do it all in one sitting. Start and stop as many times as you'd like. Work at your own pace. The important thing is to do it *completely*. That time pays you back every single day for as long as you use the app. **So please — take the time.** It is the kindest thing you can do for yourself with RxOrderly.

Your Privacy

*Your data is strictly private and encrypted. Nobody has access to it except you. **Period. Full stop.***

Your medication names, your doctors, your pharmacies, your personal details — every bit of it lives on your phone and your phone alone. RxOrderly cannot see it. Rivka SVCS LLC, the company that makes the app, cannot see it. There are no servers holding your information, no back-door access, no way at all.

When you ask the app to send a refill request, your phone composes the message and you send it from your own email or text app — even then, nothing passes through us. You're always the one in the driver's seat.

When you back up your data to a file (Chapter 21), the app can encrypt the backup with a password only you know. We'll walk you through exactly how when we get there.

This is foundational. It is how the app was built from the very first line of code, and it will never change.

Alright — that's the overview. Now let's get you set up. Chapter 2 will have you up and running in just a few minutes.

Getting Started

This chapter walks you through getting RxOrderly onto your phone and entering your very first medication. Five minutes, maybe ten if you take your time. Then you're officially under way.

Installing the App

On an **iPhone**, open the App Store, tap the search icon, type *RxOrderly*, and tap **Get**. The icon will appear on your home screen.

On an **Android phone**, open the Google Play Store, search for *RxOrderly*, and tap **Install**. The icon will appear in your apps drawer.

Either way, the icon looks like this: the letters **Rx** in friendly blue. Tap it to open.

The Welcome Screen

FIGURE 2-1 [SCREENSHOT TO COME]

The Welcome screen with the Get Started button.

The first time you open RxOrderly, a friendly Welcome screen greets you with a single tappable button: **Get Started**.

Just below the button you'll find two small links: **Terms of Use** and **Privacy Policy**. Tap either to read them; the documents open right inside the app. There's also a checkbox that says "By continuing, I agree to the Terms of Use and Privacy Policy." Tap the checkbox to check it — the Get Started button only becomes active once you do. Then tap **Get Started**.

Saying Yes to Reminders

FIGURE 2-2 · IOS + ANDROID [SCREENSHOT TO COME]

The system prompt asking permission to send reminders. Capture on both iPhone and Android.

RxOrderly will now ask whether it can send you reminders. The screen says: "Stay on top of your medications — RxOrderly can remind you when it's time to take your medication and alert you before you run out of a refill."

Tap **Allow Reminders**. The phone will then show one more system prompt to confirm. Tap **Allow** there too.

This is the one permission RxOrderly really benefits from. Without it, the app can't gently nudge you when a dose is due or when a refill is getting close. If you tap **Maybe Later**, no hard feelings — the app still works — but you'll miss the quiet, well-timed reminders that make it feel almost magical. You can also turn reminders on later from the Settings page (Chapter 20).

Adding Your First Medication

FIGURE 2-3 [SCREENSHOT TO COME]

The first-medication form, with name and frequency filled in.

Next, RxOrderly invites you to add your first medication. The page is called **Add Your First Medication** and the subtitle says “*Just four things to get started.*”

The four things are:

- **Medication name.** Start typing — the app will suggest matches from a built-in list of over 28,000 medications. Tap a suggestion and the name fills in with the correct spelling and capitalization. If your medication isn’t on the list, just type the full name yourself.
- **Dose.** The number on your bottle. For example, if your bottle says “Lisinopril 10 mg tablet,” the dose is 10.
- **Unit.** Tap to pick. For most pills the unit is mg (milligrams). Other common ones are mcg, g, mL, tabs, and capsules.
- **How often.** Tap to pick: Daily, Twice daily, Three times daily, Weekly, As Needed, and several others. Pick what your prescription says.

There’s also a fifth, optional field: **How many do you have right now?** If you can quickly count the pills in the bottle, type the number. If not, no worries — leave it blank and add it later (Chapter 8).

Helpful Tip. If you take many medications, you don’t have to add them all at once. Add just your first one now to get the app set up, then add the rest from the Dashboard at your own pace. Chapter 4 covers the full process.

When the four required fields look good, tap **Start Tracking**.

Welcome to Your Dashboard

FIGURE 2-4 [SCREENSHOT TO COME]

Your Dashboard, fresh after the first medication is saved.

You’ve just landed on the **Dashboard** — the home base of the app. From here, everything is just a tap away. Chapter 3 gives you the grand tour.

Onward — Chapter 3 walks you through every corner of the Dashboard.

Your Home Base: The Dashboard

The Dashboard is where every adventure starts. It's designed to be calm, uncluttered, and easy to read. Once you know your way around it, the rest of the app feels familiar.

A Quick Tour

FIGURE 3-1 · IOS + ANDROID [SCREENSHOT TO COME]

The Dashboard in default (collapsed) state. Capture on both iPhone and Android.

From top to bottom, here is what you see:

- The word DASHBOARD across the top.
- A small Settings gear in the top-right corner.
- A friendly hero picture below the title.
- Sometimes a Helpful Hints card or a Setup Checklist just under the picture (more on these in a moment).
- Three big tappable tiles, each one taking you to a different feature.
- A Show More strip to reveal three more tiles.
- The Task Bar running across the very bottom of the screen, with five small icons.

The Six Tiles

FIGURE 3-2 [SCREENSHOT TO COME]

The Dashboard with all six tiles visible after tapping Show More.

Tap **Show More** and the lower three tiles slide into view. Here's what each tile is for, in order:

- **Supply on Hand.** Shows how much you have of each medication and how many days until you run out. The most-used tile in the app. (Chapter 7.)
- **Manage Alerts.** Set up your daily medication reminders, view today's schedule, and tend to anything that has alerted recently. (Chapter 12.)
- **Request Refill.** When it's time, this tile composes a refill request to your pharmacy or your doctor, ready for you to send. (Chapter 9.)
- **Log Medication Supply.** Record a refill you just picked up, a new bottle you already had, or any other change in supply. (Chapter 8.)
- **Medications & ** Care Activities, Prescribers ****&**** Retailers. **Your master lists: medications, therapies, doctors, pharmacies. Where most of your setup happens. (Chapters 4 through 6 and Chapter 11.)**
- **My Profile & ** Medical ID. **Personal information, allergies, blood type, emergency contacts, insurance,**

and the Medical ID card itself. (Chapter 16.)

Tap any tile to jump straight to its page. Each chapter of this manual covers one of these features in detail.

The Show More / Show Less Strip

The Dashboard only shows three tiles by default to keep your screen calm. Tap **Show More ▼** at the bottom of the third tile to reveal the others. Tap **Show Less ▲** to tidy them away again. RxOrderly remembers which way you prefer it.

The Task Bar at the Bottom

FIGURE 3-3 [SCREENSHOT TO COME]

Close-up of the Task Bar — five icons across the bottom of every page.

Five icons across the bottom of every page in the app:

- **Home.** Takes you straight back to this Dashboard, no matter how deep you've wandered.
- **Drug Research.** Look up any medication — interactions, side effects, warnings. (Chapter 17.)
- **Savings.** The hub for finding ways to lower your prescription costs. (Chapter 18.)
- **Doc Visit Prep.** The wizard that builds a tidy printable sheet for your next doctor visit. (Chapter 15.)
- **Mental Notes.** A scratch pad for questions and symptoms to bring up at your next visit. (Chapter 14.)

The Task Bar is always there, even when you're deep inside another page — so any of these features is one tap away from anywhere in the app.

The Settings Gear

FIGURE 3-4 [SCREENSHOT TO COME]

The Settings gear in the top-right corner of the Dashboard.

Tap the small **gear** in the top-right corner of the Dashboard to open Settings. That's where you adjust alert sounds, refill reminder timing, Quiet Hours, your plan, and where you create and restore backups. The full tour is Chapter 20.

Helpful Hints

FIGURE 3-5 [SCREENSHOT TO COME]

Dashboard showing a Helpful Hint card above the tiles.

From time to time, a small friendly card appears between the hero picture and the tiles. These are **Helpful**

Hints: little reminders such as “You haven’t added a pharmacy yet” or “Your insurance card is missing.” Tap the card and the app takes you straight to the spot that needs attention.

Helpful Hints can be turned off in Settings if you prefer a quieter screen, but most people find them a friendly companion in the first weeks.

The Setup Checklist

FIGURE 3-6 [SCREENSHOT TO COME]

Dashboard with the Setup Checklist showing setup progress.

The **Setup Checklist** is a tidy little card that tracks how much of your information is filled in — something like “26 of 39 complete.” Tap any item on the checklist to jump straight to its setup page. Once everything is complete, the checklist quietly retires itself.

Helpful Tip. If you’re ever lost, tap the Home icon on the Task Bar. It always brings you back here. The Dashboard is never more than one or two taps away.

Comfortable with the Dashboard? Wonderful. Chapter 4 starts the real setup work — building out your medications list.

Your Medications List

Your medications list is the beating heart of RxOrderly. Everything — supply tracking, refill requests, reminders, your Medical ID, Doctor Visit Prep — flows from the medications you’ve entered. So this chapter is one of the most important.

Good news: it’s also genuinely easy.

Getting to Your List

From the Dashboard, tap **Show More** if needed, then tap the tile labeled **Medications & Care Activities**, Prescribers & Retailers. **You’ll see a small menu with four choices:** Medications, Care Activities, Prescribers, **and** Pharmacies / Retailers. **Tap Medications**.

FIGURE 4-1 [SCREENSHOT TO COME]

The Manage Medications page with a few entries.

If you haven’t added any medications yet, you’ll see a friendly message: “No medications added yet. Tap the button above to add your first medication.”

Adding a Medication

Tap the big blue button at the top: **+ Add Medication or Supplement**. The Add Medication form opens, and we’ll walk through it field by field.

FIGURE 4-2 [SCREENSHOT TO COME]

The top half of the Add Medication form.

The Name

Start typing the medication’s name. After three letters, suggestions appear from a built-in list of more than 28,000 medications — the same one the U.S. National Library of Medicine uses. Tap a suggestion and the name fills in with the proper spelling and capitalization.

Why This Matters. The official spelling is sometimes a little unusual — for example, you’ll see medications spelled with mixed capitals like “hydroCHLORothiazide.” That’s called tall-man lettering, a safety convention pharmacists use to keep similarly-named drugs from getting confused. Letting the app fill in the canonical name guarantees you and your pharmacy are talking about exactly the same thing.

If your medication isn’t in the list (a brand-new prescription, perhaps), just type the full name yourself. RxOrderly will accept it.

Dose and Unit

Look at your prescription bottle. Most labels say something like “**Lisinopril 10 mg tablet**”.

- **Dose** is the number: 10.
- **Unit** is what comes after: mg. Tap the Unit field and pick from a list. For pills, mg (milligrams) is by far the most common. For liquids you’ll see mL. For very small doses, mcg (micrograms). For insulin and a few others, IU. There’s also tabs, capsules, drops, and so on.

How Often (Frequency)

FIGURE 4-3 [SCREENSHOT TO COME]

The Frequency picker open, listing options like Daily, Twice daily, etc.

Tap the **Frequency** field and pick from the list: Daily, Twice daily, Three times daily, Four times daily, Weekly, Monthly, As Needed, and a handful of others. Pick what matches your prescription instructions.

This field alone is enough to make refill timing work: if you tell RxOrderly you take a pill twice daily, the app knows a 60-pill bottle lasts 30 days. (Setting up the exact *times* of day is a separate step, covered in Chapter 10.)

Prescriber and Pharmacy

FIGURE 4-4 [SCREENSHOT TO COME]

The lower half of the Add Medication form — prescriber, pharmacy, category, icon.

Tap **Prescriber** to pick the doctor who prescribed this medication. If you haven’t added that doctor yet, you can pop over to Chapter 5 first, or simply skip this field for now and come back to it later. Same with **Pharmacy / Retailer** — pick from your list, or come back after Chapter 6.

These fields are optional, but they’re what makes refill requests compose themselves automatically. Worth filling in when you can.

Category

A small label that helps RxOrderly organize your meds. The choices are *Prescription*, *Over-the-Counter*, *Supplement*, *Vitamin*, and a few others. New medications default to Prescription. Adjust if needed.

An Icon (Optional but Fun)

FIGURE 4-5 [SCREENSHOT TO COME]

The icon selection sheet.

Tap **Select Icon** and choose something that looks like your medication — a round white tablet, a blue capsule, an inhaler, a liquid bottle, a patch, an injection pen. Totally optional, but it makes the medication easy to spot at a glance later. (Don't worry about getting it perfect.)

Saving

When the form looks good, tap **Save**. The medication appears in your list. That's it — one down.

Now repeat for each medication you take. Most people are done in fifteen or twenty minutes, even with a long list.

Pace Yourself. You don't have to enter every medication in one sitting. Stop whenever you'd like and come back later. Your list saves automatically. Just remember to come back and finish — the app gets dramatically more useful once your full list is in.

Editing a Medication

FIGURE 4-6 [SCREENSHOT TO COME]

Edit Medication page on an existing entry.

Tap any medication in your list to view its details, then tap the pencil icon to edit. Change anything that needs updating — a new dose, a different unit, a new prescriber — and tap **Save**.

Changing Prescriber or Pharmacy

FIGURE 4-7 [SCREENSHOT TO COME]

The "Change Pharmacy" confirmation.

If your doctor changes, or you switch pharmacies, tap **Change Prescriber** or **Change Pharmacy** on the medication's page. RxOrderly will confirm before making the change, then update the link.

Deactivating, Not Deleting

If you stop taking a medication, please don't delete it. Instead, edit the medication and switch off the **Active** toggle.

Here's why: your history of doses, refills, and adjustments stays intact — useful for your records, your doctor, and your own peace of mind. The inactive medication simply drops off the daily lists.

If you start taking it again later, just switch **Active** back on.

Once your medications are in, Chapter 5 will walk you through adding the doctors who prescribe them.

Your Prescribers

Doctors, nurse practitioners, physician assistants, specialists, clinics — in RxOrderly we call them all **prescribers**, since any one of them might write a prescription.

Why Prescribers Matter

Three good reasons to take a few minutes to add yours:

- Refill requests need to know who prescribed each medication. The right doctor's contact details are dropped into the message for you, automatically.
- Doctor Visit Prep sheets (Chapter 15) need to know whom you're seeing — the sheet is addressed to a specific doctor.
- Your Medical ID card (Chapter 16) lists your prescribers, so paramedics and emergency room staff know who to call.

Getting to Your Prescribers List

From the Dashboard, tap **Show More**, then the combined tile, then **Prescribers**.

FIGURE 5-1 [SCREENSHOT TO COME]

The Manage Prescribers list.

Adding a Prescriber

Tap **+ Add Prescriber**. The Add Prescriber form opens.

FIGURE 5-2 [SCREENSHOT TO COME]

The top of the Add Prescriber form.

The Name and Specialty

Type your doctor's name as you'd want it shown on your refill requests — for example, *Dr. Sarah Chen*.

Tap **Specialty (optional)** to pick from a list of common specialties — Cardiology, Family Medicine, Endocrinology, Pulmonology, and so on. Skip if you'd rather not bother.

"This Is a Clinic or Institution"

FIGURE 5-3 [SCREENSHOT TO COME]

The toggle for "This is a clinic or institution."

If you're entering a place rather than an individual — a sleep clinic, an outpatient center, a group practice — switch on the toggle that says **"This is a clinic or institution."** The Specialty field disappears (institutions don't have a single specialty), and the rest of the form continues normally.

Address, Phone, Email

Enter whatever you have on hand from your appointment card or the practice's website. Phone numbers format themselves nicely as you type. The email field is what RxOrderly uses to address a refill request to this prescriber, if your doctor's office accepts refill requests by email.

Primary Prescriber

FIGURE 5-4 [SCREENSHOT TO COME]

The bottom of the form — Notes, Active, Primary Prescriber, Refill Contact.

Switch on **Primary Prescriber** for your main doctor — the one who manages most of your care. They'll appear first in lists and be suggested as the default contact on refill requests. You can only have one Primary Prescriber at a time; choosing a new one quietly moves the flag from the old one.

Refill Contact

Switch on **Refill Contact** if this prescriber's office is somewhere you'd send a refill request. Most of your doctors will be Refill Contacts. Switch it off for, say, a specialist who only sees you for consultations and doesn't manage prescriptions — that way they don't clutter up your refill picker.

Notes

The **Notes** field is for anything else you want to remember: office hours, your favorite nurse's name, a parking tip, the receptionist's direct extension. RxOrderly doesn't do anything special with this text — it's just there for you.

Saving

Tap **Save**. Repeat for each of your prescribers. Even seniors with long histories usually have just a handful, so this part goes quickly.

Inactive Prescribers

Same idea as medications: when a doctor retires or you stop seeing them, switch off the **Active** toggle. They'll drop off the daily lists but stay in your history. Turn them back on anytime if you go back.

Halfway through setup. Chapter 6 covers your pharmacies and other retailers — the places your prescriptions actually come from.

Your Pharmacies ****&**** Retailers

Pharmacies, mail-order suppliers, the vitamin shop on the corner — in RxOrderly we call them all **retailers**, since any one of them might be where you go to refill or restock.

Why Retailers Matter

Just like prescribers, the more RxOrderly knows about the places that supply your medications, the more it can do for you:

- Refill requests go to a specific pharmacy — the right phone number, the right email, the right address. The app fills all that in for you.
- You may use more than one pharmacy — a local one for everyday medications, a mail-order one for the maintenance prescriptions. RxOrderly lets you assign each medication to the right pharmacy and routes refills accordingly.
- Your Medical ID card (Chapter 16) can list your pharmacy so first responders and emergency room staff know where your prescription history lives.

Getting to Your Retailers List

From the Dashboard, tap **Show More**, then the combined tile, then **Pharmacies** (sometimes labeled **Retailers**).

FIGURE 6-1 [SCREENSHOT TO COME]

The Manage Retailers list.

Adding a Pharmacy

Tap **+ Add Pharmacy or Retailer**. The Add Retailer form opens.

FIGURE 6-2 [SCREENSHOT TO COME]

The top of the Add Retailer form — name, address, phone.

The Name

Type the pharmacy's name. If you use more than one branch of a chain, include the location — for example, "Walgreens on Main Street" or "CVS at the airport." A short, recognizable name is best.

The Address (with a Friendly Search)

FIGURE 6-3 [SCREENSHOT TO COME]

Address auto-complete suggestions while typing.

Start typing the address. After a few letters, the app suggests matches from a built-in directory of U.S. addresses. Tap a suggestion and the street, city, state, and ZIP code all fill in at once. You can also type the address by hand if you'd rather.

Phone Number

The number you'd call to ask for a refill. Type it and the app formats it nicely as (415) 555-0100 while you go.

Helpful Tip. If your pharmacy has a separate prescription refill line (many do — it's often a different number from the main store), use that one. When you request a refill by phone, RxOrderly will offer this number to call.

Refill Contact, Pickup, and Delivery

FIGURE 6-4 [SCREENSHOT TO COME]

The lower half of the form — refill contact, delivery options, notes.

Switch on **Refill Contact** if this is somewhere you'd send refill requests. Most pharmacies will be Refill Contacts; a vitamin shop, on the other hand, probably won't.

If the pharmacy offers **delivery**, switch on the delivery option and enter the address you'd like medications delivered to — usually your home, but feel free to use a different address (a son or daughter's home, an assisted-living facility, anywhere convenient). This becomes the default delivery address whenever you request a refill from this pharmacy. You can still override it on any individual refill if you need to.

Notes

Anything else you want to remember — opening hours, your pharmacist's name, parking, the secret good entrance around the back.

Saving

Tap **Save**. Repeat for any other pharmacies you use.

More Than One Pharmacy? Welcome to the Club.

Many seniors use a mix: a local pharmacy for occasional and short-term prescriptions, plus a mail-order pharmacy for the maintenance ones. Add them all here. When you go to refill a medication (Chapter 9), RxOrderly uses the pharmacy you assigned to that specific medication — so refills always go to the right place automatically.

Setup is well under way! Your medications are in, your doctors are in, your pharmacies are in. Chapter 7 will show you how to read the most-used screen in the app: Supply on Hand.

Supply on Hand

Welcome to the most-used screen in the entire app. **Supply on Hand** answers the question we all want a quiet, honest answer to: *am I going to run out of anything soon?*

Now that your medications, doctors, and pharmacies are in, this screen is genuinely useful.

Getting There

From the Dashboard, tap the very first tile: **Supply on Hand**. (It's the one with the pill bottle icon.)

FIGURE 7-1 [SCREENSHOT TO COME]

The Supply on Hand list showing several medications with their days left and units on hand.

Reading a Row

Each medication gets one neat row. From left to right, every row shows:

FIGURE 7-2 [SCREENSHOT TO COME]

A single Supply on Hand row, close up.

- **The medication name** — with its icon if you picked one.
- **Days Left** — how many days until you run out, based on the dose and frequency you entered. The number turns amber when it's under two weeks, red when it's under a week. A peaceful gray when you've got plenty.
- **On Hand** — how many units (pills, mL of liquid, etc.) you currently have. The app keeps this number current as you log refills and routine doses.
- **Last Unit** — the date your supply is projected to run out, in plain English ("Aug 14").

Helpful Tip. If a row has a small clock icon beside it, that means RxOrderly has already noticed it's getting low and queued up a refill reminder for you. The app is looking out for you.

Tapping a Row for History

FIGURE 7-3 [SCREENSHOT TO COME]

The History sheet that appears when you tap a Supply row.

Tap any row to see that medication's full **History** — refills, doses, and adjustments, sorted newest first. Great for answering questions like "when did I last refill this?" or "has the dose changed recently?"

What If a Number Looks Wrong?

If “On Hand” doesn’t match what’s actually in your bottle — maybe you got an extra month, maybe you dropped a pill and it rolled under the couch — you can fix it in a few taps. Chapter 8 covers logging an *Adjustment*, which is the polite way to say “please add (or subtract) this many.”

Now that you can read Supply on Hand, Chapter 8 covers how it gets updated: logging your refills, manual inventory, and adjustments.

Logging Your Medications

The Supply on Hand numbers from Chapter 7 stay accurate because of one quiet habit: whenever your supply changes, you tell the app. This chapter is about that telling.

Good news: it's genuinely quick — and most of the time RxOrderly handles it automatically.

When You'll Use This

Three situations call for it:

- **You picked up a refill.** The pharmacy handed you a new bottle. Log it — supply jumps up.
- **You already had medication when you started the app.** Or you found half a bottle in the medicine cabinet. Log it as “manual inventory.”
- **The number is off and needs a small correction.** Maybe you dropped one, or counted a bit differently. Log an “adjustment.”

Getting There

From the Dashboard, tap **Show More**, then tap **Log Medication Supply**.

FIGURE 8-1 [SCREENSHOT TO COME]

The Receive Medication page top, with three mode tabs.

You'll see the page titled **Receive Medication**, with three tabs across the top: **Fill/Refill**, **Manual Inventory**, and **Adjustment**. Pick the one that matches your situation.

Recording a Refill

FIGURE 8-2 [SCREENSHOT TO COME]

Prescription Fill / Refill mode with form filled in.

With **Fill/Refill** selected:

- **Medication.** Tap to pick from your list. (Only your active medications show here.)
- **How many units did you receive?** Type the count from the bottle — e.g., 30 for a 30-day supply at one tablet a day.
- **Date received.** Defaults to today. Tap it if you're catching up from a few days ago.

Then tap **Save**. Supply on Hand updates instantly — you should see the “Days Left” number jump up the next time you visit it.

Helpful Tip. The pharmacy receipt usually shows the exact count somewhere in small print, often labeled “Qty” or “Quantity dispensed.” That's the number to enter.

Recording Manual Inventory

FIGURE 8-3 [SCREENSHOT TO COME]

Manual Inventory mode, used to enter starting supply.

The **Manual Inventory** tab is for setting your *starting* supply — medication you already had on hand when you started using the app. Same three fields as a refill. RxOrderly records this as a separate kind of entry (not a pharmacy refill), so your history stays honest.

Making an Adjustment

FIGURE 8-4 [SCREENSHOT TO COME]

Adjustment mode with Increase Supply and Decrease Supply options.

The **Adjustment** tab is for corrections of all kinds. Pick **Increase Supply** if you found more medication than the app thought you had, or **Decrease Supply** if you have less — you dropped one, lost a bottle, gave one to a family member. Type the “Adjust by” number and a quick reason (free-form text) for your own records. Tap **Save**.

Logging More Than One Medication at Once

FIGURE 8-5 [SCREENSHOT TO COME]

Multiple medication rows added in a single Receive Medication session.

If you came home from the pharmacy with several bottles in one bag, you can log them all in one trip. After the first medication, tap the **+ Add medication** link at the bottom of the form and another row appears. Repeat until you’ve listed every bottle from the bag, then tap **Save** once for the lot of them.

Your supply numbers stay tidy with a few quick taps now and then. Next, in Chapter 9, the part that makes refills nearly automatic.

Refills Made Effortless

This is the chapter that pays you back the most for the time you've invested in setting up the app. RxOrderly composes refill requests for you, addressed to the right pharmacy or the right doctor, ready for you to send in your preferred way.

You always send the request yourself — from your own email, your own text app, or your own phone. RxOrderly never transmits anything on your behalf. (See Chapter 22 for why we built it that way.)

Getting There

Three good doorways into a refill request:

- The Request Refill tile on the Dashboard.
- A refill reminder notification on your phone — tap it and the app opens straight to this page.
- A Helpful Hint card on the Dashboard suggesting a refill is due.

Choosing What to Refill

FIGURE 9-1 [SCREENSHOT TO COME]

The Request Refill page listing your active medications with current supply.

At the top of the Request Refill page, you'll see all your active medications, each with its current supply line ("14 days left" or "Out: ran out 2 days ago," for example). Tap each medication you want to refill — a check mark appears.

If RxOrderly opened this page in response to a refill reminder, the relevant medication is already checked for you.

Pharmacy or Doctor?

FIGURE 9-2 [SCREENSHOT TO COME]

The Contact picker — choose Pharmacy or Prescriber.

Tap **Contact: Pharmacy** or **Contact: Prescriber**.

- **Most refills go to your pharmacy** — the bottle has refills remaining, so the pharmacy just fills it.
- **You'll write to your prescriber** when the refills on the bottle have run out and you need a new prescription before the pharmacy can fill it.

How to Send It

FIGURE 9-3 [SCREENSHOT TO COME]

The Method picker — Voice, Text, or Email.

Pick the method that suits you. RxOrderly shows you only the methods your selected contact actually accepts — based on the phone numbers and email you entered when you added them.

- **Voice.** RxOrderly writes a friendly call script that fits on your screen — everything you need to say, in order. Tap to dial the pharmacy and read along.
- **Text.** A polished SMS is composed and waiting. Tap Open & Send and your phone's text app opens with the message already typed.
- **Email.** Same idea, but for email. The message includes everything the pharmacy needs to identify the prescription.

Reviewing the Message

FIGURE 9-4 [SCREENSHOT TO COME]

The composed message preview before sending.

Whichever method you picked, RxOrderly shows you the composed message right on screen first, so there are no surprises. Have a quick read. Everything you'd want included is there: your name, the medication, the dose, the prescription number if available, and a friendly request.

Delivery Address

FIGURE 9-5 [SCREENSHOT TO COME]

The delivery address editor, used when the pharmacy offers delivery.

If the pharmacy delivers, RxOrderly will offer a **Delivery address** section in the message. The default address comes from how you set up that pharmacy in Chapter 6. To override for just this one request — say, you're visiting family in a different city — tap **Change** and enter the alternative address. Tick the **Remember this address for future refills** box if you'd like RxOrderly to keep using it from now on.

There's also a **Delivery note** field for one-off instructions like "leave with neighbor in 4B" or "call #102 on intercom."

Opening, Sending, and Confirming

FIGURE 9-6 [SCREENSHOT TO COME]

The confirmation step after the user has sent the request from their own app.

Tap **Open &** Send****. Your phone's phone app, text app, or email app opens with everything pre-filled. Tap Send (in that app), or in the case of a voice call, dial and read the script.

Come back to RxOrderly and tap **I've Submitted My Refill Request**. The app records the request and quietly remembers, so it won't remind you about that same medication again until your supply is low next time.

Helpful Tip. The Send me a copy (BCC) option for email refills puts you on the BCC line of the message — great for keeping a paper trail in your own inbox without crowding the pharmacy's view of the conversation.

If a Contact Is Missing Information

If you see a polite note that says *"No refill contact info on file. Edit this contact to add a phone number, text number, or email,"* it means the pharmacy or prescriber you picked doesn't have the contact method needed for the method you chose. Tap into the contact (Chapter 5 or Chapter 6) and add what's missing.

Refill requests off your shoulders! Chapter 10 sets up daily routines — the gentle reminders that make sure you take what you have on hand.

Daily Routines

A **daily routine** is a recurring time of day — say, “7:30 a.m. with breakfast” or “9:00 p.m. before bed” — that links to one or more medications. RxOrderly gently reminds you when each routine comes due, then offers a clean way to tap through the medications and confirm you’ve taken them.

It’s the difference between an app that *knows* your medications and an app that *helps you take* them.

Getting There

From the Dashboard, tap **Manage Alerts**. You’ll see your day laid out as a schedule, with any existing routines already on it. To add a new one, tap the **+ New Routine** button at the top.

FIGURE 10-1 [SCREENSHOT TO COME]

The Routine Editor opens for a new routine.

The page title says **Create routine**, with the subtitle “Pick a time, a cadence, and the medications.” That’s the whole job: three small choices.

When (the Time of Day)

FIGURE 10-2 [SCREENSHOT TO COME]

The When (time of day) picker.

Tap **When** and pick the hour and minute. Use a time that lines up with something you already do every day — breakfast, brushing your teeth, the evening news — and the habit will stick faster.

How Often (the Cadence)

FIGURE 10-3 [SCREENSHOT TO COME]

The cadence picker — daily, weekdays, weekends, specific days.

Tap **How often** and choose: **Every day**, **Weekdays only**, **Weekends only**, or specific days of the week. Most routines are daily, but you can mix and match if you’d like.

Which Medications

FIGURE 10-4 [SCREENSHOT TO COME]

The medication picker — check the meds taken at this time.

Tap **Which medications** and check off every medication you take at this time of day. The list shows only your active medications, each with its dose and frequency, so it's easy to pick the right ones.

Saving

Tap **Save routine**. RxOrderly schedules the reminder and the routine appears on your **Manage Alerts** day-view.

How a Routine Plays Out

FIGURE 10-5 [SCREENSHOT TO COME]

A morning routine showing on the Manage Alerts day-view.

At the scheduled time, your phone shows a quiet notification: “Morning routine — 3 medications.” Tap it and RxOrderly opens to a review sheet listing each medication, its dose, and a Take Now button. Tap each one as you take it; the supply count drops automatically.

Helpful Tip. If you take a routine’s medications without your phone in hand, no problem — come back to the app later and tap them all done at once. Or, if you genuinely missed a dose, the review sheet has a polite Skip option for each medication. Skips are recorded for your history, so your doctor can see them at your next visit.

Editing or Deleting a Routine

Tap any routine on the Manage Alerts page to edit it — change the time, the cadence, or the medications. There’s a delete option too if a routine has run its course. Inactive routines, like inactive medications, can be reactivated later.

Routines covered. Chapter 11 is about Care Activities — the non-medication routines like inhalers, walks, and blood pressure checks.

Care Activities

Not everything a doctor asks you to do every day comes in a pill bottle. Use your inhaler twice a day. Take a thirty-minute walk after lunch. Check your blood pressure on Tuesday and Friday mornings. Drink a glass of water with every meal. These are **care activities** — the non-medication parts of your daily routine — and RxOrderly tracks them with the same care it gives your prescriptions.

Getting There

From the Dashboard, tap the combined Medications & Care Activities tile, then choose **Care Activities**.

FIGURE 11-1 [SCREENSHOT TO COME]

The Care Activities list, with a few entries already in.

Adding a Care Activity

Tap + **Add Care Activity**. The Add Care Activity form opens.

FIGURE 11-2 [SCREENSHOT TO COME]

The Add Care Activity form, with name, categories, and frequency fields.

The Name

Give your activity a name that'll be friendly on the schedule — *Morning walk, Albuterol inhaler, Blood pressure check, Wound dressing change*. Whatever you'll recognize at a glance.

Picking a Category

FIGURE 11-3 [SCREENSHOT TO COME]

The 12 category chips: Inhaler, Breathing, Walking, Exercise, Stretching, Hydration, Weighing, Blood Pressure, Blood Glucose, Wound Care, Meditation, Custom.

Tap one of the small category chips. The choices are: *Inhaler, Breathing, Walking, Exercise, Stretching, Hydration, Weighing, Blood Pressure, Blood Glucose, Wound Care, Meditation, and Custom*.

If your activity doesn't fit any of the named categories, pick **Custom** — a small "Custom label" field appears so you can name your own.

Frequency

FIGURE 11-4 [SCREENSHOT TO COME]

The frequency picker (Daily, Twice daily, Three times daily, Weekly, etc.).

Tap **Frequency** and pick: Daily, Twice daily, Three times daily, Weekly, As Needed, and the rest of the same list you saw for medications.

Duration, Instructions, and Notes

- **Duration** (optional) — how many minutes the activity takes. Handy for walks and stretching.
- **Instructions** (optional) — what to remember in the moment: “Two puffs, hold breath 10 seconds”; “Use small monitor on left arm.”
- **Notes** (optional) — any other detail you’d like to remember.

Saving

Tap **Save Care Activity**. You can now add a daily routine for it just like you did for medications (Chapter 10), and the reminders behave exactly the same way.

Care Activities on Your Daily Schedule

FIGURE 11-5 [SCREENSHOT TO COME]

The Manage Alerts day-view showing both medication routines and care activities woven together.

When you add a routine that includes a care activity, RxOrderly shows it on the day-view right alongside your medication routines. Your inhaler, your morning walk, and your morning pills can all share the same 7:30 a.m. reminder if that’s how your day actually flows.

Helpful Tip. The category chips aren’t just decoration. RxOrderly uses them on your Doctor Visit Prep sheet (Chapter 15) to group similar activities together — so when your doctor asks “how’s your blood pressure tracking going?” that section of the printout is right there waiting.

Reminders, routines, and care activities all set up. In Chapter 12 we look at all of them together: the Manage Alerts page.

Reminders That Help, Not Pester

RxOrderly's reminders are designed to be the friendliest part of the app: enough to keep you on track, never so much that they feel like nagging. This chapter is a tour of the page where all of them live.

Getting There

From the Dashboard, tap **Manage Alerts**. The page that opens shows everything the app is going to remind you about — medications, care activities, refills, and doctor appointments — all in one place.

FIGURE 12-1 [SCREENSHOT TO COME]

The Manage Alerts page on the Day View tab, showing today's reminders.

The Three Tabs

Three small tabs sit just below the header:

- **Day View.** Today's schedule, hour by hour, with each routine and reminder on the timeline. Use the < and > arrows to peek at yesterday or tomorrow, or tap Today to come back.
- **Routines.** All your saved daily routines from Chapter 10, in one list. Tap any one to edit or remove it.
- **Individual Alerts.** One-off reminders — like a doctor appointment, a one-time post-surgery instruction, or a single-day task — live here.

FIGURE 12-2 [SCREENSHOT TO COME]

The Routines tab listing each saved routine.

Selecting Several at Once

FIGURE 12-3 [SCREENSHOT TO COME]

The bottom bar showing "2 selected" with the Clear Selected action available.

Need to silence three reminders before a quiet morning, or clear several from your schedule at once? Tap each one to select it — a small bar slides up from the bottom showing how many you've selected, plus a **Clear Selected** button. Saves a lot of tapping.

The Reminder Itself

When a reminder fires, your phone shows a quiet notification: the routine name and a count of medications. Tap it and RxOrderly opens directly to the review sheet for that routine. From there, you can:

- **Tap Take Now** on each medication as you take it.
- **Tap Skip** if you missed one or are intentionally not taking it.
- **Tap Take All** to mark every medication in the routine as taken at once.

Alert Sounds and Quiet Hours

FIGURE 12-4 [SCREENSHOT TO COME]

The Settings section showing alert sound choice and Quiet Hours.

Reminder behavior is controlled from **Settings** (the gear in the top-right of the Dashboard). A few options worth knowing:

- **Alert sound.** RxOrderly uses a gentle, distinctive chime by default. Tap to preview a few options and pick the one you like best.
- **Quiet Hours.** Set a start and end time during which reminders show silently — visible on your phone but not making noise. Perfect for naps, sleeping, religious services, or any other quiet stretch.
- **Refill reminder lead time.** How far in advance to remind you about low supply — seven days, ten days, two weeks. Default is ten days.

Helpful Tip. If reminders ever feel like too much, the answer is rarely to turn them off — it's usually to combine routines. Three separate breakfast reminders at 7:00, 7:01, and 7:02 are exhausting; one breakfast routine with three medications attached to it is peaceful. (Chapter 10 covers routines.)

Speaking of one-off reminders, Chapter 13 covers the most important kind: doctor appointments.

Doctor Appointment Reminders

A doctor appointment reminder is a one-off entry that wakes you up gently the night before and (if you'd like) again the morning of, so an important visit never sneaks up on you. RxOrderly stores all of them in one tidy list.

Getting There

From the Dashboard, tap **Manage Alerts**, then look for the **Doctor Appointment Reminders** → link. (You can also reach the same page from the “Add Reminder” flow on an empty schedule.)

FIGURE 13-1 [SCREENSHOT TO COME]

The list of upcoming appointment reminders.

Adding a Reminder

Tap + **Add Reminder**. A clean little form slides up.

FIGURE 13-2 [SCREENSHOT TO COME]

The Add Appointment Reminder form.

- **Doctor.** Type the name. Required.
- **Specialty.** Optional — e.g., “Cardiology.”
- **Date.** Tap to pick the appointment date.
- **Appointment time set.** Switch this on if you know the exact time and want to include it; a time picker appears.
- **Night before reminder.** Switch on and pick a time of day for the reminder to fire the evening before.
- **Morning of reminder.** Same idea, for the morning of the appointment.
- **Notes.** Anything else — the room number, the doctor’s phone extension, what to bring, “fasting required” for bloodwork.

Confirming and Tweaking

FIGURE 13-3 [SCREENSHOT TO COME]

The “Reminder Set” confirmation dialog.

Tap **Add Reminder**. RxOrderly shows a quick confirmation — something like “You’ll be notified the night before for your appointment with Dr. Chen on August 14.” Done.

To change a reminder later, tap it in the list, then tap **Edit**. To remove one entirely, tap **Delete**.

What Happens When It Fires

At each reminder time you set, your phone shows a friendly notification: the doctor's name, the date, and any notes you added. Nothing fancy — the goal is for you to see it, smile because you remembered, and go about your day.

Helpful Tip. If you also fill out your Doctor Visit Prep sheet (Chapter 15) a day or two before, the night-before reminder becomes the perfect prompt to print or save the PDF and tuck it in your bag.

Doctor Visit History

At the bottom of the appointments list is a **View Doctor Visit History →** link. Tap it to see a tidy list of past appointments — useful when you're trying to remember when you last saw a particular doctor.

Next, Chapter 14 covers Mental Notes — the little notebook for capturing questions between visits.

Mental Notes

You know the feeling: a small worry pops up on Tuesday afternoon — *“Is this dizziness new? Should I mention it next time I see Dr. Chen?”* — and by Friday it’s gone clean out of your head, only to come back the moment you’re sitting in the waiting room.

Mental Notes is RxOrderly’s little notebook for capturing those thoughts as they happen, so they show up automatically when you’re preparing for your next visit.

A Note On Plans. Mental Notes is a feature of RxOrderly Premium. The free tier shows a sample preview so you can see how it works. Chapter 20 covers upgrading.

Getting There

Tap the **Mental Notes** icon on the Task Bar at the bottom of any page. The Mental Notes list opens.

FIGURE 14-1 [SCREENSHOT TO COME]

The Mental Notes Active tab with a few notes captured.

Active and History

Two small tabs at the top:

- **Active.** Notes you haven’t yet addressed with your doctor. New ones land here.
- **History.** Notes you’ve marked as “addressed” after a visit. They live here so you can look back on what you’ve already discussed.

When you first open Mental Notes, the Active tab is selected and (if you haven’t added any yet) you’ll see a friendly empty state: *“No Active Notes — Tap the + button to capture a question, concern, or symptom you want to remember.”*

Adding a Note

FIGURE 14-2 [SCREENSHOT TO COME]

The Note editor with text field, optional medication link, and optional doctor link.

Tap the + button. A simple editor appears with the subtitle *“What’s on your mind?”* Just type your thought — a sentence or two is plenty. There’s no wrong way to write one.

Two optional fields are worth knowing about:

- **Link to a medication.** If the note relates to a specific medication (*“Lisinopril — feeling lightheaded in the mornings”*), tap to pick it from your list. When you next prepare for a visit, RxOrderly will surface notes linked to the medications your visiting doctor prescribes.

- **Link to a prescriber.** If the note is really only for one specific doctor, link it. Otherwise leave it blank and it's available for any visit.

Tap **Save**. The note appears at the top of your Active list, with a friendly “Just now” timestamp.

Marking a Note as Addressed

After a doctor visit where you discussed the note, swipe it (or tap and look for the “Mark addressed” option). It moves to the History tab, dated, and your Active list stays clean — only the unfinished business remains in front of you.

Helpful Tip. The point of Mental Notes is to write thoughts down the instant they appear, even if “the moment” is two in the morning. Type a brief sentence, save it, go back to sleep. The note will be there next week when it matters.

How Mental Notes Show Up in Visit Prep

When you start a Doctor Visit Prep (Chapter 15), Step 4 of the wizard automatically pulls in your active notes, with check marks already on the ones linked to the doctor you're seeing. Uncheck any you don't want on that visit's sheet; the checked ones land directly on the printed Visit Prep PDF as questions to discuss.

Now let's see those notes in action. Chapter 15 walks through the Doctor Visit Prep wizard, start to finish.

Preparing for a Doctor Visit

Doctor Visit Prep is one of the most-loved features of RxOrderly. In under a minute, the app turns everything it knows about you — medications, doses, refills coming due, your active mental notes, recent vitals — into a tidy printable sheet your doctor will appreciate.

A Note On Plans. Doctor Visit Prep is a feature of RxOrderly Premium, in a bundle the app calls Health Records. The free tier shows a preview of what each sheet would look like.

Getting There

Tap the **Doc Visit Prep** icon on the Task Bar — the small clipboard at the bottom of any page. The Health Records landing page opens.

FIGURE 15-1 [SCREENSHOT TO COME]

The Health Records landing page with Prepare for a Visit, Medication History, Insurance & ID, Visit Summaries, and Lab & Test Notes cards.

Tap **Prepare for a Visit** to start a new sheet. The wizard opens with the title **Prepare for Visit** and the subtitle “Step 1 of 7.”

The Seven Steps

FIGURE 15-2 [SCREENSHOT TO COME]

Step 1 of the wizard — Who are you seeing, Visit date, Visit type.

- **1. Who are you seeing?** Pick the prescriber, the visit date, and the type of visit (routine, follow-up, urgent, etc.). If you came in here from an appointment reminder, this is pre-filled.
- **2. Have any medications changed since your last visit?** Add new medications, mark any that have been discontinued, and flag dose changes. The app already knows the answer for medications you’ve recorded; this is your chance to highlight anything you want the doctor to focus on.
- **3. Which medications need refills?** Medications prescribed by this doctor that are running low show up here automatically. Check the ones you’d like discussed.
- **4. What do you want to ask or discuss?** Your Mental Notes from Chapter 14 land here, with the ones linked to this doctor pre-checked. Tap any one to edit; tap the + to add new ones on the spot.
- **5. Any symptoms or side effects to report?** A short list of symptoms with the option to link each to a specific medication. The doctor sees both the symptom and the suspected cause side by side.
- **6. Recent health measurements.** Four sections appear: Blood Pressure, Weight, Blood Sugar, Temperature, and Pulse / Heart Rate. Enter any recent home-monitoring readings you’d like to share.

- **7. Anything else to discuss?** The catch-all box for anything that didn't fit the earlier sections.

Each step has **Back** and **Next** buttons. On the last step, **Next** becomes **Review**.

Reviewing and Generating

FIGURE 15-3 [SCREENSHOT TO COME]

Step 4 of the wizard — questions to ask, with Mental Notes pre-checked.

FIGURE 15-4 [SCREENSHOT TO COME]

Step 6 — Blood Pressure, Weight, Blood Sugar, Temperature, Pulse.

After Step 7, tap **Review** and you'll see the entire sheet laid out as the doctor will see it — medications, refills, questions, symptoms, vitals, and your closing notes, all on one or two clean printed pages.

FIGURE 15-5 [SCREENSHOT TO COME]

The generated Visit Prep PDF preview, ready to print or share.

From the preview, you can:

- **Print** directly from your phone, if you have a printer set up.
- **Save** the PDF to your phone's files for later.
- **Share** the PDF by email, text, or any app that accepts files — great for emailing your doctor in advance.

After Your Visit

FIGURE 15-6 [SCREENSHOT TO COME]

The After Your Visit flow start, Step 1 of 3.

RxOrderly also offers a short **After Your Visit** flow — three quick screens to record what was decided, what changed, and what to follow up on. It's the bookend to Visit Prep and feeds your medication, notes, and history records all at once. Highly recommended for the ten minutes after you get home.

Chapter 16 covers the other thing your doctor (or any paramedic) will love: your Medical ID Card.

Your Medical ID Card

A Medical ID is a printable, wallet-sized card with the information first responders need most in an emergency: your name, blood type, allergies, key medications, emergency contacts, and your doctors. RxOrderly makes one for you from the information you've already entered.

Filling this out is fifteen minutes of work that could matter enormously on some unexpected day. Worth every minute.

Getting There

From the Dashboard, tap **Show More** if needed, then tap **My Profile & ** Medical ID****. The page that opens lists eight sections — one card each.

FIGURE 16-1 [SCREENSHOT TO COME]

The My Profile & Medical ID hub showing the eight section cards.

The Eight Sections

- **👤 Personal Information.** Name, title (Mr., Dr., etc.), date of birth, home address, mobile, home phone, email, and a delivery address (often the same as home).
- **🏠 Medical Information.** Blood type, height, weight, allergies, medical conditions, dietary restrictions — the stuff a paramedic or ER nurse needs in the first sixty seconds.
- **📞 Emergency Contacts.** Two or three people who should be called if you're unable to speak for yourself. Their phone number, relationship to you, and whether they have legal authority (power of attorney, healthcare proxy).
- **👨‍⚕️ Physicians on Card.** Tick which of your prescribers should appear on the card. Usually your primary doctor and one or two key specialists.
- **💊 Medications on Card.** Tick which medications belong on the wallet card. Most people pick just the critical ones (blood thinners, insulin, anti-seizure medications) rather than the full list.
- **🔄 Card Back.** What appears on the back of the card — usually emergency contacts and the doctor list. You can customize the layout.
- **📄 Insurance Cards.** Take photos of the front and back of each insurance card. RxOrderly stores them privately on your phone and includes them on the Medical ID for quick reference.
- **🆔 Government IDs.** A photo of your driver's license or state ID, useful at registration desks.

Filling Each Section

FIGURE 16-2 [SCREENSHOT TO COME]

The Personal Information form with name, date of birth, contact, address sections.

Each section card has a tappable arrow that opens its editor. Fill what you have on hand, tap **Save**, and the section card shows a check mark when complete. Sections with missing required information stay in their incomplete state and contribute to the Setup Checklist back on the Dashboard.

FIGURE 16-3 [SCREENSHOT TO COME]

The Medical Information form with allergies, blood type, conditions.

Helpful Tip. The single most important field on the entire Medical ID, hands down, is the Allergies field on Medical Information. A paramedic seeing “allergic to penicillin” on a card has a chance to save your life. Take a moment to make sure that field is honest and complete.

Generating the Card

FIGURE 16-4 [SCREENSHOT TO COME]

The finished Medical ID card, front and back, ready to print.

Once enough sections are complete, RxOrderly assembles the card. From the top of the My Profile & Medical ID page, tap **View Card** (or **Print Card**) and you'll see the front and back laid out side by side, ready to print at standard wallet size.

Print on slightly heavier paper if you can, trim with scissors, and slip it behind your driver's license in your wallet. Anyone who opens your wallet in an emergency will find it within seconds.

Keeping It Current

Whenever your medications, allergies, or emergency contacts change, RxOrderly updates the card automatically. Just remember to print and replace the wallet copy every six months or so. The Setup Checklist will quietly remind you.

The setup — and most of the daily features — are now covered. Chapter 17 starts the Premium chapters with Drug Research.

Drug Research

The **Drug & Supplement Research** page is a quiet, dependable second opinion. Type any medication, vitamin, or herbal supplement and RxOrderly fetches what the U.S. Food and Drug Administration says about it — what it's for, what it interacts with, what side effects to watch for, and what warnings come with it.

A Note On Plans. Drug Research is a feature of RxOrderly Premium. The free tier shows a preview so you can see how it works.

Getting There

Tap the **Drug Research** icon on the Task Bar — the small magnifying-glass-over-a-pill icon at the bottom of any page.

FIGURE 17-1 [SCREENSHOT TO COME]

The Drug Research search page with the search box at the top.

Searching

Start typing the name of any drug or supplement. As with the medication list (Chapter 4), suggestions appear from a built-in database of more than 28,000 medications. Tap a suggestion and the results load.

The Four Tabs

FIGURE 17-2 [SCREENSHOT TO COME]

The Overview tab for a drug, showing what it's used for and key facts.

Four small tabs across the top organize what the FDA has to say:

- **Overview.** What the medication is, what conditions it's typically prescribed for, and the active ingredient.
- **Interactions.** Other medications, foods, and supplements that may interact with it — useful to scan before adding a new prescription to your list.
- **Side Effects.** Both common side effects (the kind your pharmacist will mention) and less common ones to be aware of.
- **Warnings.** The serious cautions — black-box warnings, contraindications, and population-specific guidance (pregnancy, kidney issues, etc.).

FIGURE 17-3 [SCREENSHOT TO COME]

The Interactions tab listing other drugs that may interact.

Helpful Tip. Drug Research is information, not advice. If something you read concerns you, don't stop taking the medication on your own — jot a question into Mental Notes (Chapter 14) and bring it up at your next doctor visit. Your prescriber knows your full picture in a way no app can.

Chapter 18 covers Find Savings — the other side of the same coin: information about what your medications cost and how to lower the bill.

Find Savings

Prescription costs can take a real bite, and the programs that help with them are buried in places hard to find. **Find Savings** is RxOrderly's effort to bring them together in one tidy, friendly page — with a built-in eligibility checker for the major programs.

A Note On Plans. Find Savings is a feature of RxOrderly Premium. The free tier shows a preview.

Getting There

Tap the **Savings** icon on the Task Bar at the bottom of any page (the small dollar-sign icon).

FIGURE 18-1 [SCREENSHOT TO COME]

The Find Savings page showing Your Medications & Costs, Spent this year, and Resources & Programs sections.

Tracking What You Spend

The top section is **Your Medications & Costs**. Each medication in your list appears with a small dollar amount — what you've paid for it this year, based on the costs you've recorded when picking up refills (Chapter 8).

A running total — **Spent this year: \$X.XX** — sits at the top. It only counts what you've told the app about; if some refills don't have a cost recorded, the total will be lower than reality.

Helpful Tip. If your refill is free (you're on Extra Help, or it's covered by a low copay plan), record the cost as \$0.00 — that way the year-total is accurate, and the medication doesn't show as missing data.

The Eligibility Screener

FIGURE 18-2 [SCREENSHOT TO COME]

The Eligibility Screener with questions about Medicare, household size, income, and ZIP.

Tap **Check Your Eligibility** to start the screener. It asks four short questions:

- **1. Do you have Medicare?** (Yes / No / Not Sure.)
- **2. Household size.** Yourself plus anyone who depends on your income.
- **3. Approximate annual household income.** Before taxes; include Social Security, pensions, wages, investment income for everyone in the household.
- **4. Zip code.** Used to identify state-specific programs.

FIGURE 18-3 [SCREENSHOT TO COME]

The Your Results page listing programs the user may qualify for, like Medicare Extra Help.

Tap **Check My Eligibility** and the page shows you which programs you may qualify for — **Medicare Extra Help (LIS)**, your **State Pharmaceutical Assistance Program**, and patient assistance from the drug manufacturers. Each result has a direct link to apply or learn more.

Important To Know. The screener uses 2025 Federal Poverty Guidelines and publicly available program information. It's an estimate — actual eligibility depends on assets, residency, and program-specific rules. Always verify with the program directly or with a free SHIP counselor.

Resources & Programs

FIGURE 18-4 [SCREENSHOT TO COME]

The Resources & Programs list with Extra Help, SHIP Counselor, Medicare Plan Finder, NeedyMeds, RxAssist.

Below the screener is a curated list of well-known programs. Each one is a tap-through to its official website:

- **Extra Help (Low Income Subsidy).** The federal program that helps cover Medicare Part D costs.
- **SHIP Counselor Locator.** Free, unbiased Medicare help in every state — in person or by phone.
- **Medicare Plan Finder.** Compare Medicare drug plans by cost and coverage.
- **NeedyMeds.** The comprehensive database of patient assistance programs — especially useful for brand-name medications.
- **RxAssist.** Another patient-assistance directory, with discount drug card information.

Chapter 19 covers your History — everything the app has quietly recorded since you started using it.

Your History

Everything you've done in RxOrderly is quietly recorded — every refill request, every supply change, every doctor visit. The **History** page lets you look back at any of it, organized into three tidy tabs.

Getting There

From the Dashboard, tap **Show More** if needed, then the History tile (or reach History from the bottom of Supply on Hand). The page title reads **History** with the subtitle “Refill Requests · Supply Log · Doctor Visits.”

FIGURE 19-1 [SCREENSHOT TO COME]

The History page with the three tabs — Refill Requests, Supply Log, Doctor Visits.

Refill Requests

Every refill request you've sent (Chapter 9) is recorded here, newest first. Each row shows:

- The date you sent it.
- The medications you requested.
- How you sent it (a small icon: phone, text, or email).
- The status — submitted, filled, picked up — based on what you've told the app.

Supply Log

FIGURE 19-2 [SCREENSHOT TO COME]

The Supply Log tab listing refills, manual inventory entries, and adjustments.

Every supply event — refills, manual inventory, adjustments — appears here, with the medication, the quantity, and the date. Useful when you're trying to remember when you last picked up a particular prescription, or when you're reconciling your pharmacy receipts at year end.

Doctor Visits

Every doctor visit you've generated a Visit Prep sheet for (Chapter 15) is listed here, with the date, the prescriber, and a  **View &** Share Visit Sheet**** button that re-opens the PDF you generated. Great for revisiting what was discussed without having to dig through your phone's files.

Helpful Tip. If you ever need to prove to insurance, the IRS, or your tax preparer how much you spent on prescriptions in a year, the Supply Log tab combined with Find Savings (Chapter 18) gives you the answer in two minutes.

Chapter 20 covers Settings — the gear in the top-right corner of the Dashboard, where you make the app match the way you live.

Settings ***** Personalization

Most of RxOrderly works just right with the defaults, so you may never need to visit Settings at all. But if you ever want to tweak a sound, adjust quiet hours, hide inactive medications, or check what plan you're on, this is the page.

Getting There

From the Dashboard, tap the small **gear** in the top-right corner. The Settings page opens.

FIGURE 20-1 [SCREENSHOT TO COME]

The Settings page top, showing Alerts and Refill Reminders sections.

Alerts

- **Enable Alerts.** The master switch. Turn off to silence all RxOrderly notifications without uninstalling.
- **Alert Sounds.** Tap to choose from a small selection of friendly chimes. RxOrderly uses the same gentle chime on both iPhone and Android by default.
- **Play a sound when an alert fires.** A separate toggle for sound itself, useful when you want visual notifications only.
- **Default time of day for medication reminders.** If you don't set a specific time on a routine, this is the time the app uses.
- **Notifications not working?** A small troubleshooter link — tap it if reminders aren't arriving and the app will walk you through enabling system permissions.

Refill Reminders

- **Remind Me to Refill.** The master switch for refill reminders. (Separate from the master Alerts switch above, so you can turn off refill nudges while keeping dose reminders.)
- **How many days before you run out should we remind you?** Seven, ten, fourteen, or twenty-one days. Default is ten.
- **Preferred Alert Time.** Time of day refill reminders prefer to fire.

Snooze

- **Snooze Duration.** How long a snoozed reminder waits before re-firing.
- **Max Snooze Count.** How many times a reminder can be snoozed before RxOrderly gently stops offering Snooze.

Quiet Hours

FIGURE 20-2 [SCREENSHOT TO COME]

The Settings middle, showing Quiet Hours and Display Filters sections.

- **From / to.** Start and end times of your Quiet Hours.
- **During Quiet Hours.** Pick how reminders behave: show silently, delay until Quiet Hours end, or skip entirely.

Display Filters

Three little toggles that keep your lists tidy:

- Hide Inactive Medications.
- Hide Inactive Prescribers.
- Hide Inactive Retailers.

When on, your lists show only what you're currently using. When off, you see everything including the inactive entries.

Helpful Hints

The toggle that turns on or off the friendly dashboard hint cards you met in Chapter 3. Off, the dashboard is quieter; on, the app proactively suggests things you might want to do next.

Data ****&**** Backup

The home of all backup and restore controls. Full detail in Chapter 21.

Your Plan

FIGURE 20-3 [SCREENSHOT TO COME]

The Settings Your Plan section showing current plan and trial controls.

Shows your **Current Plan** — Free or Premium — with a short description of what each includes. If you're on Free, a **Start Free Trial** button lets you try Premium for thirty days.

Help

- **Read User Manual.** Opens this manual right inside the app, ready to scroll.
- **Email, Text or Print User Manual.** Share the manual by email or text, or print it on paper if you'd prefer a physical copy.
- **Notifications not working?** The same troubleshooter from the Alerts section, repeated here for convenience.

About

The app version, the copyright notice, and the cheerful reminder that **“RxOrderly is strictly a personal medication organization tool. It is not a medical tool and does not provide medical advice.”**

Next, Chapter 21 covers backups in detail — the safety net you’ll be glad you have.

Backups: Your Safety Net

Everything RxOrderly knows about you lives on your phone — which is wonderful for privacy (Chapter 22) but does mean that if you lose your phone, you'd lose the data along with it. The fix is simple: make backups, store them somewhere safe.

Getting There

Open **Settings** (the gear in the top-right of the Dashboard), and scroll down to the **Data & Backup** section.

FIGURE 21-1 [SCREENSHOT TO COME]

The Data & Backup section in Settings with Create Backup, Restore, Cloud Backup, and Undo Last Restore.

Creating a Backup

FIGURE 21-2 [SCREENSHOT TO COME]

The Create Backup dialog with the optional password prompt and hint field.

Tap **Back Up Now** (or **Create Backup**). RxOrderly offers an optional password:

- **Leave the password blank** and the backup file is unencrypted — convenient, but anyone who gets the file can read it.
- **Enter a password** and RxOrderly encrypts the file with AES-256, the same encryption used by banks and governments. The file is unreadable without the password — even to us. There's a small optional hint field too, in case you want a memory jog later.

The app saves the backup file to your phone's downloads folder and offers a share sheet so you can send the file to wherever it's safest for you — email it to yourself, save it to iCloud or Google Drive, attach it to a message to a trusted family member.

Pace Yourself. Use a password you can actually remember. If you forget the password, the file becomes unrecoverable — even Rivka SVCS can't open it. That's the price of real privacy: it's real for you too.

Restoring from a Backup

FIGURE 21-3 [SCREENSHOT TO COME]

The Restore from Backup confirmation dialog, warning that current data will be replaced.

Tap **Restore Data from Backup File**, pick the backup file (from downloads, email, Drive, wherever), enter the password if you used one, and confirm. RxOrderly replaces the current data with what was in the file.

If you change your mind — maybe you restored the wrong file, or restored an older one by mistake — tap **Undo Last Restore** to revert to what you had before. RxOrderly keeps one undo step.

Cloud Backup

The **Cloud Backup** section is the future home of automatic, encrypted, end-to-end-protected backups to RxOrderly's servers — same encryption as the password-protected files above, just handled for you on a schedule. This feature isn't enabled in the current version of the app; when it ships, it will be turned off by default, and you'll be able to turn it on from this section.

Clean Up Visit PDFs

Visit Prep generates a PDF for each doctor visit. Over time, those files add up. Tap **Clean Up Visit PDFs** to delete the saved files from your phone — the visit records in your history are untouched, just the PDF files go.

Helpful Tip. A good rhythm: create a backup whenever you've done meaningful setup work — after adding all your medications, after filling out the Medical ID, after each major doctor visit. Once a quarter is enough for routine maintenance.

Chapter 22 explains, in plain English, why your data stays on your phone in the first place — RxOrderly's privacy promise.

Your Privacy in Plain English

You shared a brief version of this in Chapter 1. Here's the longer version, in plain language, written so that you can read it once and know exactly where you stand.

The Short Version

*Your data is strictly private. Nobody has access to it except you. **Period. Full stop.***

The Six Promises

Six commitments are built into RxOrderly — not just policy decisions that could be reversed, but architectural choices that shape the way the whole app works.

1. We Will Never Sell Your Data

Not now, not in the future, not under any circumstance. There is no data-monetization business model here. RxOrderly is funded by Premium subscriptions, and that's it.

2. Your Information Stays on Your Phone

Your medication list, your doctors, your pharmacies, your insurance cards, your personal details — every bit of it is stored only in the app's database on your phone. RxOrderly has no servers holding copies of your information, and the company that makes the app cannot see it.

This is an architectural decision, not a policy promise. The app simply doesn't send your data anywhere. The infrastructure to do so doesn't exist.

3. When You Send a Refill Request, You Send It — Not Us

The composed message from a refill request opens in your own phone's email, text, or phone app. You tap Send. Nothing passes through RxOrderly's systems. The pharmacy receives the message from you directly, with your phone's normal return information.

This is the "app composes, user sends" principle. It keeps RxOrderly out of the middle of every transaction with your healthcare providers — which is exactly where you don't need a middleman.

4. Cloud Backups Will Be End-to-End Encrypted

When automatic cloud backups arrive in a future version (Chapter 21), they will be encrypted on your phone before being uploaded, using a key only you hold. Rivka SVCS, the company that makes the app, will not be able to decrypt your backup — not even with a court order, because we won't have the key.

This is the same approach used by Signal, Apple iCloud Advanced Data Protection, and a handful of other privacy-first services. It's the strongest practical guarantee available.

5. Same Architecture for Everyone

RxOrderly may, in the future, offer white-label versions of itself to pharmacies and clinics — an RxOrderly with

their branding. Those white-label versions use exactly the same privacy architecture as this one. There is no “pharmacy-back-end” mode where the pharmacy gets to see your data. The promise is the same in all editions.

6. AI Conforms to These Rules, Not the Other Way Around

If RxOrderly ever uses artificial intelligence to help with anything — reading a medication label from a photo, summarizing a doctor’s instructions — the work happens on your phone first. Anything that does need to leave your phone is stripped of personal details (names, dates, identifiers) *before* it leaves. AI is a tool in the same toolbox as the rest of the app; it conforms to the privacy rules, never the other way around.

The Bottom Line

You can use RxOrderly as if it were a paper notebook you keep in your pocket: yours, private, only ever seen by you and the people you choose to show it to. That’s not a marketing tagline; it’s how the app is built.

Chapter 23 is a short collection of practical tips — the things I’d tell a friend who just installed the app.

Tips from Jacques

If you were standing next to me at the coffee shop and had just installed RxOrderly, here's what I'd tell you. Some of these you've seen in the chapters above; they're worth gathering in one place.

Set It Up Completely

I know I keep coming back to this one. It really is the whole game. An app that knows three of your medications and one of your doctors is fine; an app that knows everything is a partner that does work for you every day. The setup is honestly just an hour or so, spread out however you like.

Use One Routine Per Time, Not One Per Pill

If you take four medications with breakfast, make one routine called "Morning — with breakfast" with all four medications attached. Not four separate reminders fighting for your attention. Far gentler on the nerves.

Match Routine Times to Things You Already Do

"Breakfast," "with the morning paper," "after my walk," "before bed" — these stick. Arbitrary clock times don't. Tie a routine to a thing you already do every day and you'll never miss it.

Print the Medical ID, Replace It Every Six Months

Print on slightly heavier paper, trim with scissors, slip it in your wallet behind your driver's license. Every six months, when the date on the card is more than half a year old, print a fresh one. If you ever need it, the person rifling your wallet will find it in fifteen seconds.

Record Costs as You Go

When you pick up a refill, take the extra ten seconds to log the cost too. By year-end, your Find Savings page will be a real, accurate picture of what you spent — useful for taxes, useful for switching plans, useful for arguing with insurance.

Use Mental Notes the Moment a Thought Arises

The whole point of Mental Notes is to capture thoughts when they appear, even if "the moment" is two in the morning or in the middle of a TV show. Five seconds to type a sentence, save, done. By your next visit, you'll have a tidy list rather than the usual scramble of "I know there was something I wanted to mention."

Update Pharmacies and Prescribers When They Change

If you switch pharmacies, take two minutes to add the new one and switch each affected medication over. If a doctor retires or you change practices, edit the prescriber. RxOrderly only does the right thing if it knows the right things.

Deactivate, Don't Delete

When you stop a medication, switch **Active** off rather than deleting. Your history stays intact — useful for the doctor, useful for you. Same for prescribers and pharmacies.

Back Up After Big Changes

After you finish the initial setup, create a backup. After each major doctor visit where things changed, create another. With a password you can remember. Save the file somewhere you can find it in a year — email it to yourself, save it in your Dropbox, hand a copy to a trusted family member. Phones get lost. The backup is the safety net.

Schedule Doctor Visit Prep the Day Before

The night before an appointment, take five minutes with the Doctor Visit Prep wizard (Chapter 15). Print the sheet, fold it, slip it in your bag. Your doctor will thank you and you'll cover everything you meant to cover.

Don't Be Afraid to Email Me

I answer every email at **support@rxorderly.com** myself. There is no support team yet — just me, with a cup of coffee, working through whatever's in the inbox. If something is broken, if something is confusing, if there's a feature you wish existed — tell me. I'd rather hear from you than not.

Final chapter, Chapter 24: where to turn when you need help.

Getting Help

You’ve made it to the last chapter. Here are the places to turn when you have a question, when something doesn’t work, or when you just want to talk to a human.

Email Me

support@rxorderly.com is the front door. I read every message and answer every one personally — usually within a day or two. If you’re reporting a problem, the more detail the better:

- What you were trying to do.
- What you tapped right before it happened.
- What you expected, and what happened instead.
- Your phone model and operating system version (iOS 17, Android 14, etc.) — both shown in your phone’s Settings app.
- The RxOrderly version number, visible at the bottom of the in-app Settings page (Chapter 20, About section).

A screenshot of what you’re seeing on your phone — if you know how to take one — is the most helpful thing you can send. (On iPhone: press Side button + Volume Up. On Android: press Power + Volume Down. Both save the picture to your photos.)

The Manual Itself

This manual is the most thorough reference for the app, and it lives right inside it. Open **Settings** (the gear in the top-right of the Dashboard) and tap **Read User Manual** any time. If you’d like a copy to keep, tap **Email, Text or Print User Manual** on the same page.

Reminders Not Arriving?

FIGURE 24-1 [SCREENSHOT TO COME]

The Notifications-not-working troubleshooter step-through.

The single most common technical issue is “my reminders stopped showing up.” Almost always, it’s a system-level notification permission that got turned off — usually by an iOS or Android update, occasionally by a misplaced tap. From **Settings**, tap **Notifications not working?** and the troubleshooter will walk you through getting the permissions back in place.

If Data Goes Missing

If you ever open the app and something looks wrong — medications missing, a doctor gone — don’t panic. Two safety nets:

- **If it just happened after a restore**, tap Undo Last Restore in Settings (Chapter 21) to go back to where you were before.
- **If you have a recent backup file**, restore from it (Chapter 21).

- **If neither helps**, email me — the app sometimes records error reports automatically that help me figure out what happened on your specific phone.

If the App Crashes

When the app crashes, it records what happened (technical details, nothing personal) and sends them privately to Rivka SVCS so I can investigate. You don't have to do anything. If the crash kept you from doing something important, a short email telling me what you were trying to do helps me find your specific crash report faster.

Plans, Pricing, and Trials

Settings → Your Plan shows your current plan and what it includes. If you'd like to try Premium, tap **Start Free Trial** — you get thirty days, no credit card required during the trial. If you decide it's not for you, just let the trial expire; nothing happens, the app simply returns to the free tier and your data stays as-is.

A Closing Thanks

Thank you for reading this all the way through. Building RxOrderly has been one of the more meaningful projects of my life, and the fact that you took the time to learn it properly means a great deal.

I hope it serves you well. Take care of yourself.

Warmly,

Jacques Fiorentino

Founder, Rivka SVCS LLC

Maker of RxOrderly
